Hello world![1]

---

[1]See http://rohanverma.net/blog/2017/12/20/setting-up-latex-on-spacemacs/ to see how to setup LaTeX environment (must put latex and pdf-tools in dotspacemacs-configuration-layers section, then put the function in the dotspacemacs/user-config function. Also, don't forget to install texlive in the terminal).
